Executive Introduction: Innovative technologist and product strategist with **18+ years of experience** architecting end-to-end digital products, interactive 3D experiences, and domain-specific SaaS platforms. Co-Founder and Technology Leader at **Technoayan Digital Transformation Services Pvt. Ltd.**, driving product architecture, cloud scalability, and creative technical vision across modern web/mobile application stacks, interactive 3D/PBR pipelines, real-time spatial computing, and design-to-code automation across both high-velocity startups and mission-critical enterprise systems.

PROJECT EXPERIENCE & TECHNICAL TRACK RECORD

1. Projects Executed as Founder at Technoayan Digital Transformation Services Pvt. Ltd.

Voxelforge AI (srushtilabs.com/voxelforge/)

Developed Voxelforge AI, a generative AI platform creating modular 3D assets from user prompt inputs. Generates game-ready, low-poly modular 3D models and asset bundles optimized for immediate assembly in Unreal Engine, Unity, and real-time WebGL engines, cutting prototyping turnaround from days to minutes.

Ayam3d (ayam3d.in)

Extended the Voxelforge concept into Ayam3d ('Ayam' meaning Dimension), generating parametric-based 3D models from natural language prompts in seconds using custom trained AI models. Received early investor interest; actively developing and seeking strategic partners to scale the AI pipeline.

2. Projects Executed at Cyient Limited / PHILIPS Healthcare

Philips Intellispace Critical Care & Anesthesia (ICCA)

Served as Senior Technology Leader (React / NodeJS) delivering hospital ICU software products. Challenging 24/7 mission-critical healthcare environment passing stringent quality and safety benchmarks set by Philips and hospital networks. Security of the application was critical: strictly enforced Multi-Factor Authentication (MFA), Cross-Site Scripting (XSS) prevention, role-based access control (RBAC), and patient data protection. Delivered end-to-end best practices, modular architecture, and production services.

3. Projects Executed at Ness Digital Engineering

Entertainment Management Application

As Senior Analyst / Tech Lead, led a development squad to build an Entertainment Management Application using Angular, TypeScript, Node.js, and AWS. Architected the complete single-page application structure, enforced accessibility standards (WCAG) and code quality linters, and took technical leadership in deploying and delivering the application to the client on schedule.

4. Projects Executed at Moonraft Innovation Labs (Unit of UST Global)

Enterprise Cross-Framework UI Design System

Built, architected, and engineered a centralized design system using LitElement Web Components, React, AngularJS, Node.js, and npm packaging. Stored all standardized UI components in a central repository, eliminating reinventing the wheel across client projects and guaranteeing brand coherence from a single codebase.

Luxury Hotel Group Mobile Application

Led mobile engineering team to develop a cross-platform mobile booking application for a premier Indian hotel group (TLC Group of Hotels) built using Ionic and Angular, delivering high performance and polished guest experiences.

5. Projects Executed at UST Global / CISCO

Cisco Stadium Vision Director Platform Modernization

Senior Systems Analyst and Associate Project Manager for 4+ years on Cisco Stadium Vision Director—an enterprise digital media distribution platform deployed in major international stadiums. Took technical leadership in systematically migrating the legacy Flash and Flex platform to modern Angular and React modules step by step. Comprised numerous sub-applications with active global clients; successfully executed the migration without disrupting live stadium operations. Recognized with multiple UST Global Excellence Awards.

6. Projects Executed at ThoughtFocus Technologies

Aftermarket Parts Explorer Application

UI Architect and Tech Lead for an enterprise aftermarket parts procurement platform supporting millions of parts from diverse manufacturers. Built an interactive 3D viewer allowing buyers to inspect 3D models and dimensions of thousands of components, integrated with cart and payment gateways (Adobe Flex, Mate, ActionScript, HTML).

Enterprise UI Solutions & Bootstrapping

Established early user prototyping pipelines. Guided team to bootstrap high-speed enterprise search applications and an operational logistics management application for a large milk/dairy corporation (HTML, CSS, JavaScript, TypeScript, Flex).

7. Facility Dashboard Development at CISCO & Vodafone (Independent Consultant)

Unified Building Management Systems (BMS) Dashboard

Designed and developed an interactive facility dashboard at Cisco Systems campus as a full-time consultant (2009–2010). Developed a unified web interface connecting to and controlling diverse Building Management Systems: Air Handling Units (AHUs), Variable Refrigerant Volume (VRVs), industrial chillers, and environmental sensor telemetry. Awarded formal Certificate of Appreciation from Cisco in 2010. Also delivered data visualization dashboards for Vodafone operations.

8. Other Specialized Engineering Projects (Technoyana Digital)

Apart from traditional software development, led and delivered diverse multi-disciplinary projects: architectural 3D visualization and animated walkthroughs; customized CNC machine development and automated CAD/CAM toolpath pipelines; built consumer mobile application *SellAny*; and led development of an automated parking payment mobile application with real-time slot occupancy tracking. Visual Database Developer at CAE Simulation Technologies (flight simulator 3D databases).

SUMMARY

Synthesis of Design & Engineering Mastery

As a graduate in Human Interface Design (M.S. in Computing, UK) and holding an engineering degree in Electronics and Communication (B.E.), I possess a balanced, end-to-end mastery of both the design and software development aspects of digital product creation with vast experience across the entire product lifecycle.

Proven Versatility Across Startup Velocity & Enterprise Scale

My 18+ years of experience encompass handling both small and large teams and projects at various stages of product maturity—from fast-paced startup incubation (Technoyana, SrushtiLabs, Twitan) to large-scale, safety-critical enterprise systems (Philips ICU Healthcare, Cisco Systems, UST Global, Ness).

Pledge for Self-Training & Professional Certification

As per the requirements of the **Senior Manager – IT** role, I pledge to proactively upskill myself for the needs of the team, role, and organizational responsibilities.

I agree to undertake and complete any required professional and enterprise certifications (e.g., Cloud Architecture, ITIL, Cybersecurity/CISSP, or Project Governance) as per project and team needs before and upon joining.
